Mr. Marty Perrone, C.T.R.
Certified TEGG Representative
Carpenter Electric, Inc.
1333 53rd Street
Mangonia Park, FL 33407

Dear Marty & TEGG Team,

The purpose and intent of this letter is to let you know how impressed I am, with the outstanding job that your TEGG TEAM did when they tested the Critical Electrical Components in our dealership.

The investment we made in your Predictive & Proactive testing was worthwhile when your team uncovered incorrect fuses being used in the main switchgear safety disconnect to our chiller. This could have caused considerable damage and down-time, not to mention costly repairs.

There were also a few minor items that were found and repaired on the spot. Most importantly a loose wire that was generating excess heat in a breaker. This was seen in the thermal imaging photo, after it was tightened the camera showed that the heat was reduced to a normal range.

Your TEGG Team was very professional and having worked in the electrical trade myself for many years, I would highly recommend your unique brand of Predictive & Proactive Testing of Electrical Components to anyone who owns a facility and wants to avoid the expense of an accidental shut-down due to electrical component failure.

The risk and liability associated with employee injury and or down-time in a business is very important as well as costly. Therefore this program would be an excellent tool for businesses to foresee and prevent expensive problems before they happen.

Yours Truly,

A handwritten signature in cursive script that reads "David W. Simpson".
